Cadence

Design system foundations

Tokens and components shared by every learner and admin screen. Cards are the unit of layout; status is always carried by text and shape, never by colour alone.

Principles

1. **One card, one decision.** Each card leads to one primary action.
2. **Progress is everywhere.** Every course and lesson card shows where you are.
3. **Status = icon + word + colour.** Never colour alone.
4. **Dark only for video.** The player card is the single dark surface, so focus lands there.
5. **Mobile-first grids.** 4 → 2 → 1 columns at 1200 / 720px.

Cadence

Learn at your own pace. Pick up right where you left off.

Every lesson remembers your last position, so a ten-minute break never costs you ten minutes.

Engineering In progress

TypeScript for Production APIs

Build a typed Node.js API end to end: request validation, layered services, database access and the tests that keep it honest.

4h 20m · 3 modules · 12 lessons · Intermediate · Instructor **Tunde Bakare**

Collapse all

Module 1 · Foundations
4 lessons · 1h 10m · 4/4

- 01 · Project setup & tsconfig — 12:05 Completed
- 02 · Types that model your domain — 18:30 Completed
- 03 · Errors as values — 16:40 Completed
- 04 · Typed route handlers — 22:10 Completed

Module 2 · Validation & services
4 lessons · 1h 25m · 3/4

- 05 · Validating input with Zod — 14:20 In progress · 61%
- 06 · Service layer boundaries — 24:00 Completed
- 07 · Repositories & transactions — 26:15 Completed
- 08 · Pagination done right — 20:30 Completed

Module 3 · Auth & testing
4 lessons · 1h 45m · 0/4

- 09 · Sessions & secure cookies — 28:10 Not started
- 10 · Role-based authorization — 22:45 Not started
- 11 · Integration tests with Supertest — 30:20 Not started
- 12 · Shipping: config & logging — 24:05 Not started

What you'll build

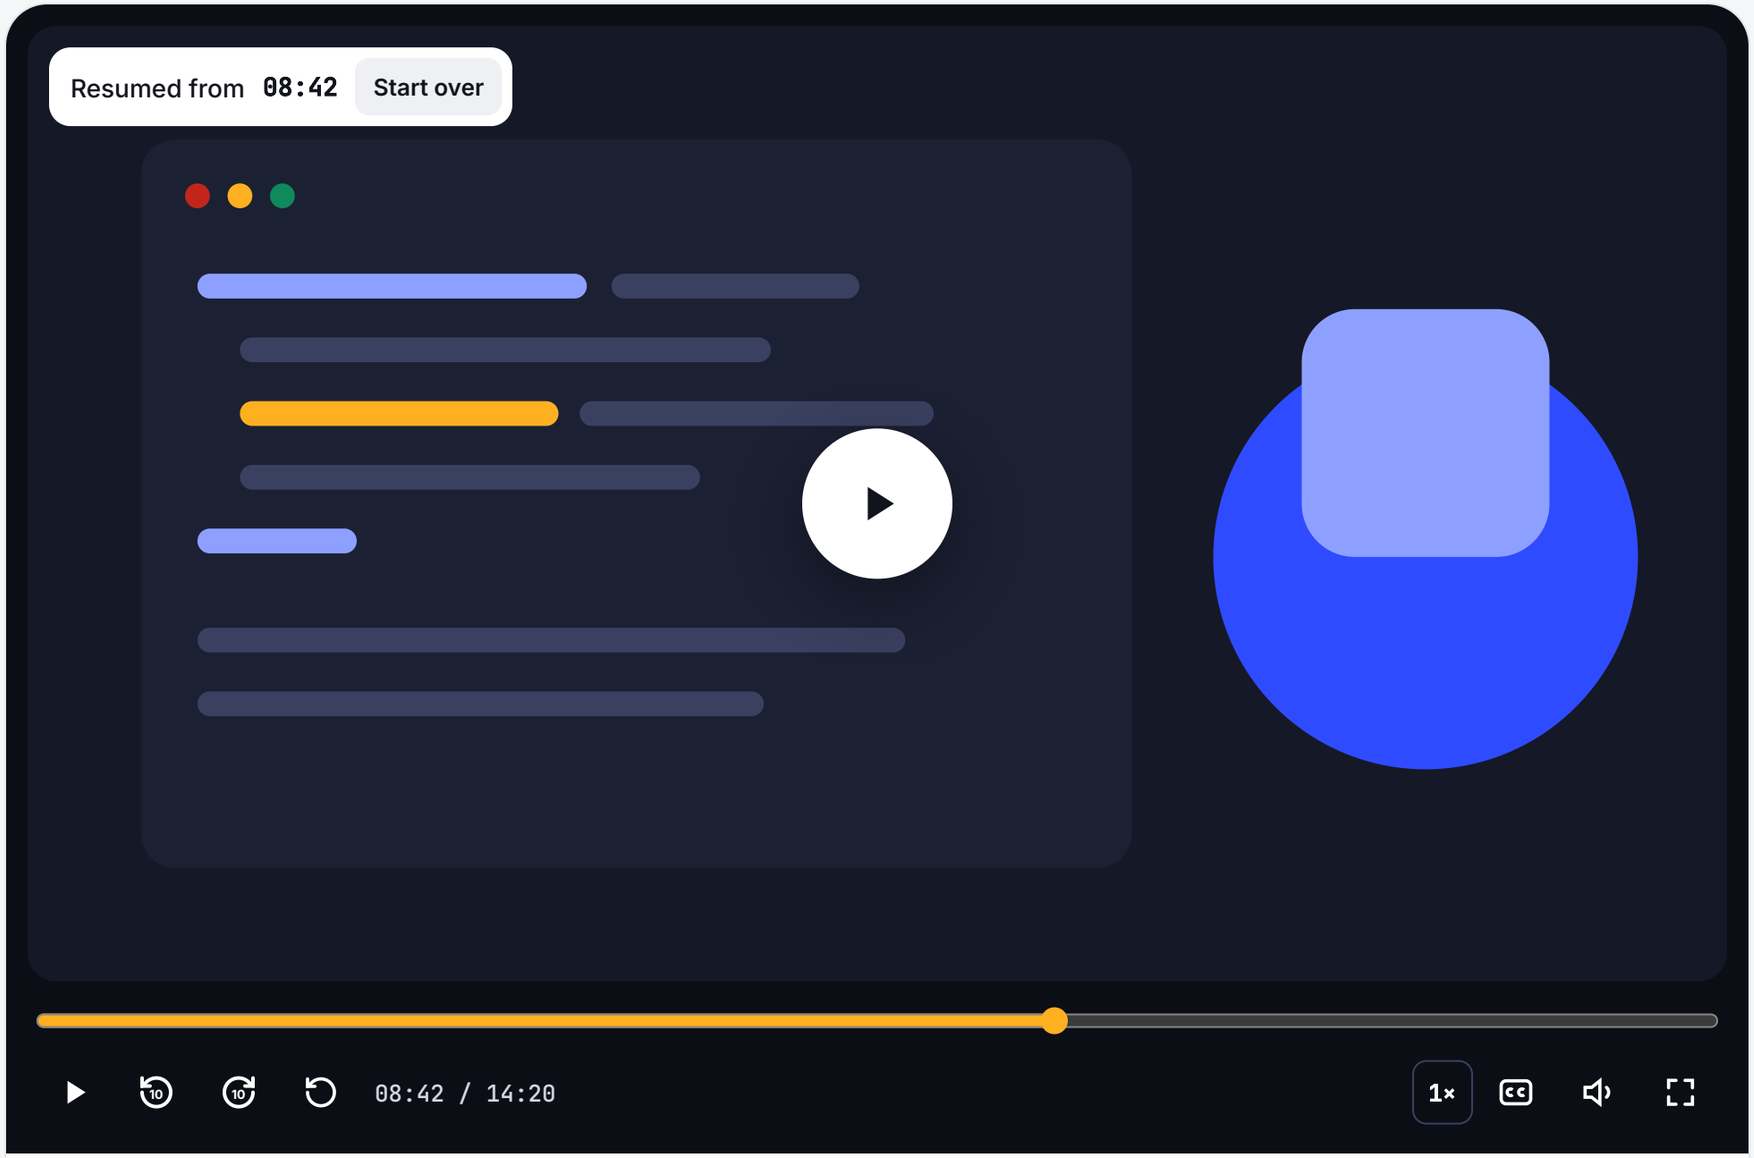

- A layered API: routes → services → repositories
- Schema validation shared by client and server
- Role-based auth with secure cookies
- An integration test suite for every endpoint

Lesson 5 of 12 · 14:20 · Tunde Bakare

Overview | Transcript | Resources · 3

Define one schema per request body, infer the TypeScript type from it, and return structured 422 errors the frontend can map straight onto form fields.

✓ Position saved automatically every 10 seconds and on pause.
